

THE 3-AGENT BUSINESS STACK

The exact AI agents that run my business 24/7: inbox, DMs and content. What each does, and how to build your first one today.

AGENT 1

THE INBOX AGENT

Checks email every 2 hours. Sorts what matters, spots opportunities, drafts replies. You only approve. Build it with Claude Code + your Gmail (via MCP).

AGENT 2

THE DM AGENT

Someone comments a keyword, it replies and DMs them your link or freebie. Runs on autopilot with a tool like Zernio or ManyChat. Set up once, works forever.

AGENT 3

THE CONTENT AGENT

Writes the script, makes the voice, edits the reel, queues the post. You press publish. One dashboard shows everything (that's my real one in the reel).

COPY THIS • BUILD AGENT 1 IN CLAUDE CODE

"Build me an inbox agent: every 2 hours, read my new emails via the Gmail MCP, sort them into [CLIENT / OPPORTUNITY / NOISE], research anyone who looks like a real lead, draft replies in my voice, and post a summary to [MY SLACK / NOTES]. Never send without my approval."

START WITH ONE

One agent that works beats five that half-work. The inbox agent is the easiest first win.

APPROVAL FIRST

Let agents draft, not send. You stay in control while you learn to trust the system.

ONE DASHBOARD

Pipe everything into one page you check each morning. If you can't see it, you can't run it.
