

MAKE AN AI PERSON SELL YOUR PRODUCT

She is not real. You can make her in about 10 minutes. Here is how, in 3 easy steps.

STEP 1

MAKE HER PHOTO

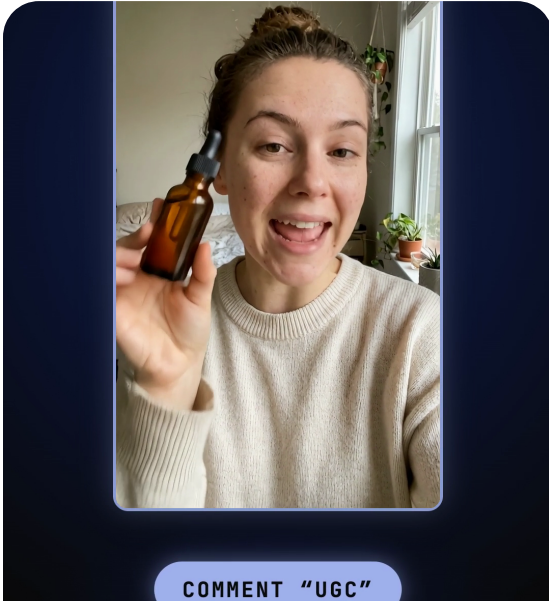

Ask an AI image tool (like Nano Banana) for a selfie of a person holding your product. Copy the prompt below. Save the best photo. This photo is your "actor".

STEP 2

MAKE IT MOVE

Put that photo into an AI video tool (like Kling). Tell it what she should DO: "she talks to the camera and shows the bottle." You get a 5 second video.

STEP 3

VOICE + POST

Write 3 short lines about your product. Turn them into a voice with AI (like ElevenLabs). Match her lips to the voice, add captions, and post it.

COPY THIS PROMPT • STEP 1

"Phone selfie photo of a friendly young woman holding [YOUR PRODUCT] next to her cheek, smiling at the camera, bright room, natural daylight, real skin texture, slight phone camera grain. No text, no logos."

KEEP IT REAL

Phone-camera look beats studio look. Small flaws make it believable.

ONE PHOTO = MANY VIDEOS

Reuse the same photo again and again. Same face, new script every time.

WHY IT WORKS

A human creator costs \$150+ per video. This costs cents and never misses a deadline.
