

CLAUDE CODE, UNLIMITED

Never stop at a usage limit again. A free router switches you to the next free model the second Claude runs out. About 5 minutes to set up.

01 INSTALL 9ROUTER 2 COMMANDS

Run `npm install -g 9router`, then `9router`. A dashboard opens at `localhost:20128`. Free, open source, 23,000+ stars on GitHub.

02 CONNECT FREE PROVIDERS NO CARD

In the dashboard, connect a free provider. **OpenCode Free** needs no signup. Kiro AI gives ~50 free credits a month. 40+ providers, 100+ models.

03 POINT CLAUDE CODE AT IT SET & FORGET

Set the endpoint to `http://localhost:20128/v1` and paste the key from your dashboard. Auto-fallback: subscription → cheap → free. **Your session never stops.**

COPY • PASTE • RUN

```
$ npm install -g 9router
```

```
$ 9router
```

```
# dashboard opens at localhost:20128
```

TIP 01

Turn on RTK in the dashboard. It compresses tool outputs and saves 20-40% of your usage.

TIP 02

Keep your Claude subscription. The router uses it first, then falls back to other providers.

TIP 03

Works with Cursor, Codex and other AI tools too. One router for everything.
