

THE 5-TOOL DESIGN STACK

Your AI-built site works, but it looks AI-made. These 5 tools make any site and any brand look like you hired a designer. No design skills. Most of it is free copy-paste.

01 ACETERNITY UI TOOL 1

Copy-paste website sections that look expensive: 3D cards, glowing hero sections, animated effects. **200+ free components**. Copy one, paste it in your project, done.

ui.aceternity.com

02 MAGIC UI TOOL 2

150+ free, open-source animated components: marquees, bento grids, animated beams, text effects. Built to drop straight into any shadcn / Tailwind project.

magicui.design

03 TWEAKCN TOOL 3

A visual theme editor for shadcn/ui. Pick a theme and your **whole app restyles in one click**: colors, fonts, radius. Real-time preview, no signup. tweakcn.com

04 MOTION TOOL 4

The animation library behind the smoothest sites on the web (it used to be called Framer Motion). **Buttery scroll, spring and layout animations**, free and MIT licensed.

motion.dev

05 MUCINLY TOOL 5

Your site looks designed, now your content should too. **Paste a link** and Mucinly turns your brand into ready-to-post ads, social posts and product shots, always on brand.

mucinly.ai

TELL YOUR AI BUILDER • COPY PASTE

```
> Restyle my site: use Aceternity for the hero section,  
> Magic UI for animated components, apply a tweakcn theme,  
> and add smooth Motion animations on scroll.
```

TIP 01

Don't mix 5 styles. Pick ONE theme in tweakcn first, then add components. Everything will match.

TIP 02

Steal from the best: browse the showcase pages of these tools and copy what the top sites do.

TIP 03

You do not need to code. Paste the prompt above into Claude Code or Lovable and it wires everything for you.
