

EVERY TOOL IN MY 48-HOUR SYSTEM

The reel showed the output: 9 reels, 2 carousels, 10 guides, DM funnels, a scheduled week. Here is every tool behind it, and the one job each does.

BRAIN

CLAUDE CODE

THE OPERATOR

The agent that runs everything: writes scripts, builds the visuals, cuts the video, posts it. One prompt in, finished reel out. This is the center of the system.

VOICE

ELEVENLABS

MY CLONED VOICE

Reads every script in my voice, with word-level timestamps. The cuts land exactly on the words. That is why it feels human-edited.

FACE

HEYGEN + LIPSYNC

AVATAR AND REAL FOOTAGE

My avatar for talking-head hooks, and lipsync models that put new words on my real footage. Some videos use neither, voiceover only. Variety keeps it fresh.

VISUAL

HIGGSFIELD

IMAGES + VIDEO MODELS

Hyperreal images and short video clips (covers, b-roll, scene shots) from one face reference, so every visual looks like me and stays on brand.

MOTION

HYPERFRAMES + REMOTION

MOTION GRAPHICS

The kinetic titles, counters and springy animations are code, not a timeline. HTML in, buttery 60fps motion out. Hera and Mosaic cover advanced MG when needed.

SHIP

ZERNIO

PUBLISH + DM FUNNELS

Posts to Instagram, TikTok and Facebook from one API. Runs the comment keyword DMs, the guide delivery, and the 20-hour follow-up. Leads while I sleep.

RADAR

SEARCH SCRAPERS

TOPICS FROM REAL DATA

Every topic comes from what people actually search on TikTok and Google, scraped daily. I never guess what to post.

HOW IT CHAINS • ONE POST, START TO FINISH

 posts + arms the DM funnel
My job: review the draft, hit approve. That is the whole job.
