

RUN CLAUDE CODE FOR FREE

Keep the exact Claude Code app you love. Swap the paid brain for a free one. Three ways, pick one, done in about 5 minutes.

01 OPENROUTER EASIEST

Install the free proxy, then paste an **OpenRouter** key. It gives you free models like **DeepSeek**, **Kimi** and **GLM**. Best place to start.

02 NVIDIA NIM FAST

Grab a free **NVIDIA** developer key. Same proxy, more free credits, very fast responses for heavier coding sessions.

03 OLLAMA 100% LOCAL

Run models on **your own computer** with Ollama. No key, no internet, no bill, ever. Great for privacy.

COPY • PASTE • RUN

```
$ npx free-claude-code
```

```
# then paste your free key and pick a model
```

TIP 01

Start with a coding model (DeepSeek or GLM). They are 80-90% as good as Claude.

TIP 02

Keep your real Claude key too. Switch back for the hardest tasks.

TIP 03

Free tiers have limits. Ollama (local) has none.
