

MAKE AI VIDEO WITH GOOGLE OMNI

Type a scene → get a real video with the sound already in it. Same face in every shot. Real voice, no dubbing. Three steps.

01

DESCRIBE THE SCENE

Write it like you are telling a friend: **"rain-soaked tokyo alley · neon · steam"**. You get real motion AND the sound of the place — rain, street noise, everything.

02

DROP ONE PHOTO IN

Add one clear photo as a **reference image**. Omni keeps the **same face in every shot** — new place, new light, same person.

03

MAKE IT TALK

Put the words in quotes: *she says: "This is not a real video."* The voice is **generated with the video**. No dubbing, no lip-sync tools.

COPY • PASTE INTO OMNI

The same woman from the reference photo in a softly lit studio, medium close-up, speaking to camera, she says: "This is not a real video." hyperrealistic, natural voice. No text, no watermarks.

TIP 01

Say the sounds you want (rain, crowd, sizzle). Omni bakes them in.

TIP 02

One clean, well-lit reference photo. Front-facing works best.

TIP 03

Keep clips 5-8s. Cut them together for longer stories.
